Password Protection Function:

Keyboard locking feature will be activated when the ⬤ switch is turned to the left, when keyboard is locked, the keyboard will not be able to provide any service. When ⬤ is switched to the right, the keyboard is activated and ready to use. A passcode can be set up to activate and deactivate the keyboard as well.

Password Setup:

1. Make sure the keyboard is turned on.
2. Press ⊚ button.
3. Create a passcode between 1-6 digit when the number key caps are lit up, then press enter to confirm the passcode.
4. Password is set up completely after all the steps above have been completed.

**Please Note:

1. When the password is entered incorrectly, you may re-enter the correct password again after keypads have done flashing.
2. If the password is entered incorrectly 3 times, it will go back to the first step of initial password setup.
3. Password setup will end if ⊚ is pressed during the setup.
4. To cancel entering the password login, just simply press the "enter" key on the keyboard.
5. The password will not be wiped out even when the keyboard is disconnected from the power.

Please enter the correct password when the keyboard is first turned on from the off mode (number keypad will be flashing to remind you) to unlock the keyboard. If the password is entered incorrectly for 7 times, the keyboard will lock itself up.

Change Password:

1. Please make sure keyboard is turned on.
2. Press ⬚ Key.
3. Enter the original password when the number pad is flashing, then press "enter" key to confirm.
4. Press ⬚ key when it is lit up after entering the correct original password, then you can reset the new 1-6 digits new password.
5. If the password is entered incorrectly, you may re-enter the password after the keypads flashed. However, if the password is entered incorrectly for 7 times, the keyboard will lock itself up.

**Please Note:

1. If the password is entered incorrectly 3 times during the password reset process, the password reset will fail.
2. When the keyboard is locked due to entering the incorrect password for too many times, you may use a tool with sharp tip to poke the hole on the bottom of keyboard by the stand to erase the password.

Backlit Feature:

typemaster® X400 provides and supports 7 types of backlit which includes: Solid, Breathing, Single Color, Reactive, Wave, Ripple, Lightening modes. Please use Fn+F2 key to adjust the backlit modes.
